

- Bamboo Stick allows easy and rapid cleaning, without pain
- Bamboo Stick is ready to use: no preparation time necessary
- The suppleness and softness of the Bamboo Stick cotton tip respects the skin and the mucosa of the auditory canal
- An unequaled capacity for absorption
- The Bamboo Stick is used and recommended by Veterinarians everywhere

The Bamboo Stick cotton bud is specifically designed for ear care in dogs. The volume of the cotton is twelve times greater than that of a “human” bud, it therefore absorbs twelve times more. The diameter and the shape of the Bamboo Stick bud makes it nearly impossible to get around the shoulder of the auditory canal and prevents penetration of the deeper portion.

### Why use the BambooStick®?

### **An integrated capacity for absorption**

The volume of the cotton is twelve times greater than that of a "human" bud, it therefore absorbs twelve times more.

Furthermore, thanks to the unique shape of the Bamboostick<sup>®</sup> bud, surface contact with the auditory canal is optimized, allowing rapid and complete removal of all secretions present in the folds of the auricle.

### **Perfectly safe cleaning of the ears**

The diameter and the shape of the Bamboostick<sup>®</sup> bud makes it impossible to get around the shoulder of the auditory canal, and therefore prevents penetration of the deeper portion.

Even for a large dog, the diameter of the inner portion of the auditory canal (close to the eardrum) is tightened, so undesired contact with the eardrum is virtually impossible on a dog while it is awake.

### **Appreciable time-saving**

BambooStick<sup>®</sup> allows easy and rapid cleaning, without pain. BambooStick<sup>®</sup> is ready to use: no preparation time necessary, no tidying up afterwards (no cleaning of instruments).

### **A special ergonomic design**

The bamboo shaft of the BambooStick<sup>®</sup> is pleasant to manipulate and offers good rigidity, without being breakable.

### **Incomparable softness**

The suppleness and softness of the BambooStick<sup>®</sup> cotton tip respects the skin and the mucosa of the auditory canal.

1. Hold or have a helper hold the dog's head and pour few drops of a cleansing liquid into the auditory canal.

2. Massage the base of the auditory canal for about a minute. If the surroundings allow it, let the dog shake its head (beware of splashes!).

3. Use the BambooStick<sup>®</sup> to absorb the residual liquid, and remove the dirt and secretions stuck to the auricle and the entrance to the auditory canal.
